## ATTORNEYS AT LAW

### Free Review Of Your Insurance Policy

Do you know if you are fully covered under your insurance policy for an injury that could happen to you? Do you know if you have coverage to pay for your medical bills in the event of an accident? What about coverage for someone that is uninsured or underinsured?

Imagine you are a passenger in a D.C. Cab when that cab driver causes an accident. If your medical bills exceed the amount of that driver's policy, you could be personally responsible for those medical bills. However, you could have coverage under your own insurance policy. Also, what happens if another car strikes your vehicle and flees the scene. Do you know if you would be covered under your insurance?

We at Wingfield & Ginsburg want to make sure that you are carrying sufficient coverage under your own insurance policy. Please call today to schedule an appointment with one of our attorneys to conduct a complimentary policy review. Bring in your insurance policy and we'll

## **What sport is more dangerous than football?**

You hear a lot about sports injuries, but bicycles aren't often included—even though the injury rate is higher than football's.

This spring, as you and your family hit the pavement and trails, keep safety in mind. One of the easiest ways to protect yourself while riding a bike is to wear a helmet. According to the American Association of Neurological Surgeons, riding a bike without a helmet is more dangerous than any contact sport. In 2009, 86,000 head injuries that resulted in a trip to the hospital were due to bicycle accidents. In comparison, 47,000 were from football injuries. In addition to head injuries, cyclists suffer neck and spinal injury, skin abrasions, and fractured bones.

Wingfield & Ginsburg is a proud sponsor of the Washington Area Bicyclist Association.

## **Red Means STOP**

One of the first rules of the road people learn, often in childhood, is to stop at a stop sign. Running a stop sign is one of the most basic types of accidents, but it can result in catastrophic injury and death.

Stop signs help keep pedestrians, bikers, and other drivers and passengers safe in both business and residential areas. Distraction, or driving under the influence, can result in failure to see a sign and stop. This scenario is particularly dangerous as it could involve high rates of speed. Drivers also make judgment errors that can result in accidents—for example, not realizing that opposing traffic doesn't have a stop sign. Stop-sign accidents often result in side-impact and rear-end collisions, causing vehicle damage, injury, and death. The risk of catastrophic injury and death greatly increases when a pedestrian or a cyclist is struck by a driver who fails to stop or yield correctly at a stop sign.

If you or a loved one has been injured in a traffic accident, contact our office for a confidential consultation.

**CALL US. YOU'RE GOING TO FEEL A WHOLE LOT BETTER ABOUT THINGS**

matters that need attention, please let us know. If we cannot handle the matter, we will refer you to a competent firm that can. Please feel free to refer us to your family, friends, and neighbors for their legal needs. We welcome the opportunity to help.
